**Date:** Monday, June 12, 2017 11:33:21 AM

---

*Glyphosate has been shown to be a neurotoxin, endocrine disruptor, mineral chelator, antibiotic, and carcinogen, which also causes liver disease. Because no comprehensive, long-term, independent study has ever been done that shows real life exposure levels for glyphosate, the safe level of glyphosate exposure on a daily basis is currently ZERO. Please vote NO*
